

Responsibility

The CI or delegate is responsible for conducting UAT, ensuring it fulfills CTSU Management requirements. As eCRF should be designed clearly, and in compliance with the protocol, UAT should check each clinical data set due to be collected during the study. UAT should be conducted for all possible roles of potential users participating in the study conduct.

SOP 38b Associated Document 3 - User Acceptance Testing

The following has been taken from SOP 38b AD 3, for more information please click [here](#)
