Data Manager

The data manager is a senior role with full access to all study data and the ability to program data quality rules and raise queries. Data Managers would not normally be assigned to a data access group although this may be practical where a site wishes to be more involved in the data quality process. Data Managers should be able to access the following:

- Data Exports - Full Data Set

- Add/Edit Reports

- Stats & Charts

- Calendar

- Data Export

- Logging

- File repository

- Create, edit and execute data quality rules

- Open, close and respond to queries

- Create, rename and delete records

- Data Entry Rights - View & Edit
